Open Science Community Olomouc

OSCO: Vision

“Our vision is that **everyone** involved in different phases of research **understands Open Science**, voluntarily follows it and **keeps own sanity** :-)

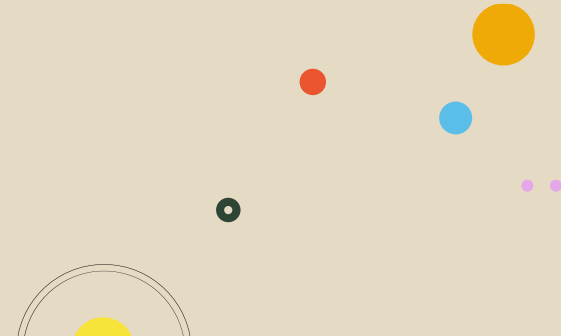

Open Science offers a **new perspective** of producing, sharing and communicating knowledge and results in research and improves the quality, efficiency, reproducibility and responsiveness of science. However, it has also been shaped into **various concepts**, initiatives and sources which can be **overwhelming** and make human beings feel **dizzy and lost**. Therefore, whether a newbie or an old hand, the **Open Science Community leads** everyone through the world of Open Science as **simply** as possible, as **understandably** as possible, and **as entertainingly** as possible.”

OSCO: Vision
